

IN THE CLAIMS:

Please amend the claims as shown below. The claims, as pending in the subject application, read as follows:

1. to 11. (Canceled).

12. (Currently Amended) An access system for accessing an address,

comprising:

an operation device for outputting a control command of a direction of an image pickup device;

a receiving device for receiving an image picked up by ~~the an~~ image pickup device[[,]] which is controlled based on the [[a]] control command of the [[a]] direction of the image pickup device[[,]] and information on the an area corresponding to the direction of where the image is picked up by the image pickup device[[,]] which is controlled on the basis of in response to the control command; and

a control device for determining whether the image received by said receiving device includes a predetermined image based on the information on the area corresponding to the direction of where the image is picked up by the image pickup device, and for executing processing for accessing an address corresponding to the predetermined image by referring to a memory storing an address corresponding to the picked-up image, corresponding to the based on a result of the determination.

13 (Original) An access system according to Claim 12, wherein, when the image received by said receiving device is included within the predetermined image, said control device causes program code to run for accessing the address corresponding to the predetermined image.

14. (Original) An access system according to Claim 12, wherein the address includes a URL.

15. (Original) An access system according to Claim 12, wherein the address includes an email address.

16. to 26. (Canceled).

27. (Currently Amended) A An access method for accessing an address, comprising the steps of:

outputting a control command of a direction of an image pickup device;

receiving an image picked up by an the image pickup device[[,]] which is controlled based on [[a]] the control command of the direction of the image pickup device[[,]] and information on the an area corresponding to the direction of where the image is picked up by the image pickup device[[,]] which is controlled on the basis of its response to the control command;

determining whether the received image includes a predetermined image

based on the area corresponding to the direction of where the image is picked up by the
image pickup device; and

executing processing for accessing an address corresponding to the
predetermined image by referring to a memory storing an address corresponding to the
picked-up image, ~~based on a~~ corresponding to the result of the determination.

28. (Original) An access method according to Claim 27, further comprising
the step of:

running program code for accessing the address corresponding to the
predetermined image, when the image received in said receiving step is included within the
predetermined image.

29. (Original) An access method according to Claim 27, wherein the
address includes a URL.

30. (Original) An access method according to Claim 27, wherein the
address includes an email address.

31. to 41. (Canceled).

42. (Currently Amended) A storage medium storing a program for
executing an operational processing method of an access system for accessing an address.

wherein the program comprises:

program code of an outputting step of outputting a control command of a direction of an image pickup device;

program code of a reception step[[,]] of receiving an image picked up by an the image pickup device[[,]] which is controlled based on [[a]] the control command of [[a]] the direction of the image pickup device[[,]] and information on the an area corresponding to the direction of where the image is picked up by the image pickup device[[,]] which is controlled on the basis of in response to the control command;

program code of a determination step[[,]] of determining whether the received image includes a predetermined image based on the area corresponding to the direction of where the image is picked up by the image pickup device; and

program code of an access step[[,]] of executing processing for accessing an address corresponding to the predetermined image by referring to a memory storing an address corresponding to the picked-up image, corresponding to the based on a result of the determination.

43. (Original) A storage medium according to Claim 42, wherein, when the image received in the reception step is included within the predetermined image, access step runs software for accessing the address corresponding to the predetermined image.

44. (Original) A storage medium according to Claim 42, wherein the address includes a URL.

45. (Original) A storage medium according to Claim 42, wherein the address includes an email address.
